DETAILED ACTION

Election/Restriction

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13 drawn to a method for measuring frequency interference between a plurality of cell sites, classified in class 455, subclass 278.1.
 - II. Claims 14-25 drawn to a telecommunication system with a switch, and its connected computer, classified in class 455, subclass 561.
- 2. The inventions are distinct, each from the other because of the following reasons:
- 3. Inventions I, and II are related as combination and subcombinations. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention I drawn to a method for measuring frequency interference between a plurality of cell sites. The subcombination has separate utility whereas invention II is about a (distinct) telecommunication system with a switch, and its connected computer. See MPEP § 806.05(d).
- 4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

"Art Unit: 2685

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
